

## ORIGINAL WIREFRAMES

These were my original wireframes. I wanted to use a lot pictures and be able to flick through the images on the homepage. I originally was going to have 4 page, a home page, and 3 different pages for each of my interactions. After talking with my tutor I realised I was only able to have 3 page so I changed to a home page, and about page, and a page with all 3 interactions on it.

# DESIGN PROCESS

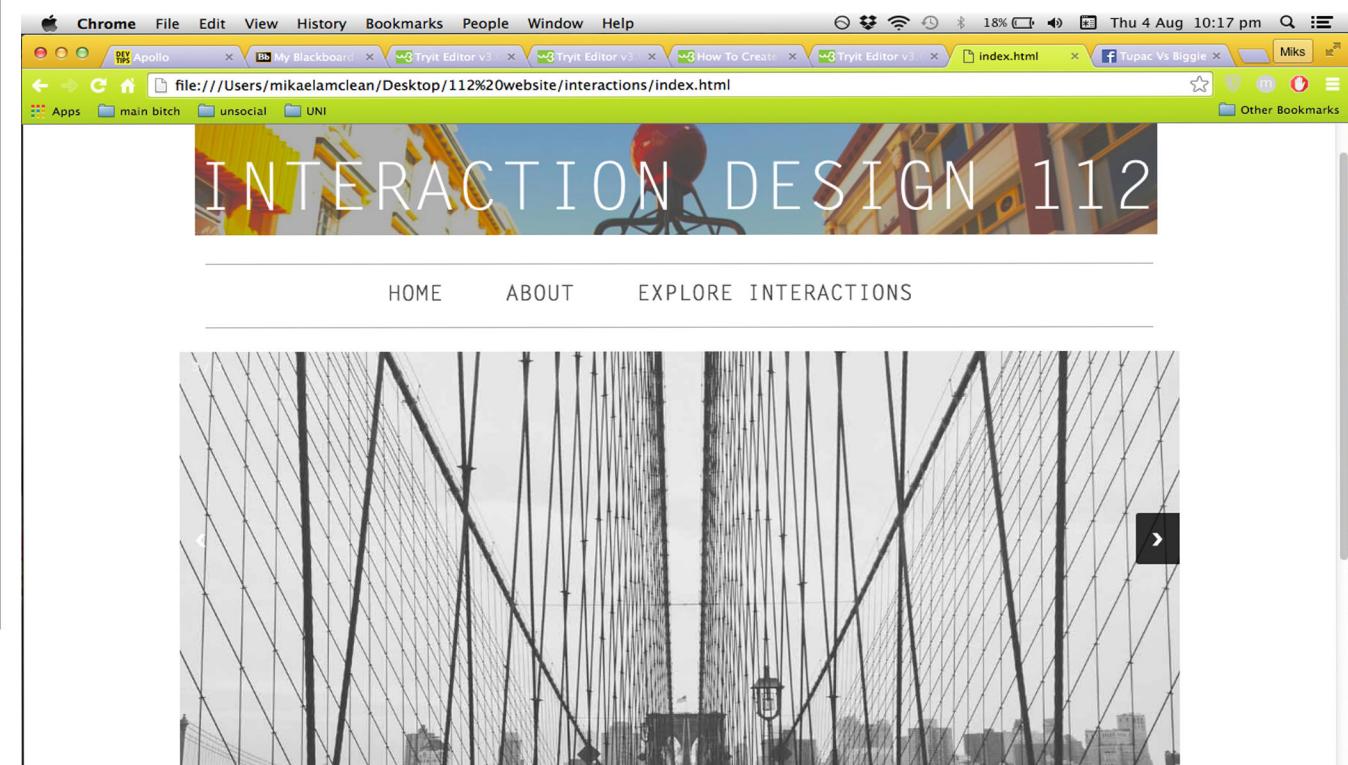

I did a lot of research into what I wanted the aesthetic to look like on my web page. These were my initial ideas. I knew I wanted to have a slideshow of my interaction images. I also wanted to work with the images being black and white to have a minimalist contrast with my header image and my journey maps.

UNIT 3: HTML STRUCTURE: TABLES, DIVS, AND SPANS

- Lesson: HTML Basics III  
Paragraphs and lists are great, but sometimes you want to lay your webpage out in a more complex way. Enter tables, divs, and spans!
- Lesson: Clickable Photo Page  
Have you ever wanted to make a photo album or collection of images like the ones you've seen on Facebook or Pinterest? All it takes is a table.
- Quiz: HTML Structure: Tables, Divs, and Spans

HOME ABOUT EXPLORE INTERACTIONS

This was my starting point, I was able to get the 3 pages I wanted, and they linked into another page. I next wanted to make a heading border and make the navigation go right across the page.

After creating my header I knew that most of my webpage was colourful and related to my journey maps. This meant that I wanted my other images on the home page to be in black and white to create a minimalist feel. With my coding process I used websites to help me create the carousel on my home page which I wanted to be my main interaction and look aesthetically pleasing for the user interface.
